

Day 3: Charlie Chaplain

CIERA Research Group

June 15, 2016

1 PROBLEM 3 - WORDCOUNT

This problem is a word count problem. Your task is to disseminate Charlie Chaplain's speech from the classic film *The Great Dictator* and determine which words are most commonly used. Start by downloading the textfile `charlie.txt` from the github page and putting it an appropriate location on your desktop.

Your task is to create a bash script that reads *charlie.txt* and outputs a sorted list of the 10 most commonly words used, along with their frequency, one on each line. The output of the script should be something like:

```
word 1: 24
word 2: 17
word 3: 14
...
...
```

Hint - you may want to make use of the `wc` command (and possibly options) for this task!
